

Adaptation Project Planner

You will choose a plant or animal to teach us about. You will teach us about the parts of your plant or animal, and what they're for. You'll also need to tell us about 2 adaptations that help your plant or animal survive. **We will spend some time in class working on these, but you may have to work at home also.* You may do a poster, power point, photostory, video, iMovie, educreation, descriptive writing with illustrations, model, prezzi, or another type of project, but you must include the following:

*If you choose a **Plant**:*

- include the 4 main parts of your plant (roots, stem, leaves, & flower) and what each does.
- 2 adaptations that help your plant survive (photosynthesis could be one)

*If you choose an **Animal**:*

- include information on what body parts your animal uses to *move, control body temperature, support itself, and get food.*
- 2 adaptations that help your animal survive.

Here's how you'll be graded

Four plant/animal parts correctly labeled	1	2	3	4					
Functions of plant/animal parts correctly described	1	2	3	4	5	6	7	8	
2 Adaptations correctly listed and described	1	2	3	4	5	6			
Neatness/Quality	1	2	3	4	5
